

Fujitec Hong Kong Renews Fastest Elevators

Delivery of 44 elevators for offices in the financial district of Hong Kong

Fujitec Co., Ltd. delivered 44 elevators to the Three Garden Road through its Group company in Hong Kong, FUJITEC (HK) Co. Ltd. (President: Chong Ming Sung). The Three Garden Road consists of two high-rise office buildings in the financial district of Hong Kong. Elevators delivered include 16 elevators that operate at a speed of 480 meters per minute, the fastest elevators available at FUJITEC (HK) Co., Ltd. This delivery marks the largest number of units delivered by the Fujitec Group for office modernization※.

Fujitec renovated the Three Garden Road elevators to improve safety and functionality, as the Fujitec elevators installed at the time of construction had been in operation for over 25 years. Renovated elevators now operate under the EZSHUTTLE control system, which assigns elevator cars to passengers automatically according to their destination floors, to improve operation efficiency.

For the safety and reliability of its passengers, Fujitec recommends renovating elevators in operation for 20 to 25 years. The Company will continue to develop and encourage modernization products on a global scale, contributing to the creation of sustainable social infrastructure and towns for comfortable living.

※Elevator modernization is the process of improving elevator performance by transforming old elevators into one equipped with the latest technology.

Three Garden Road

Elevators installed

Modernization Overview

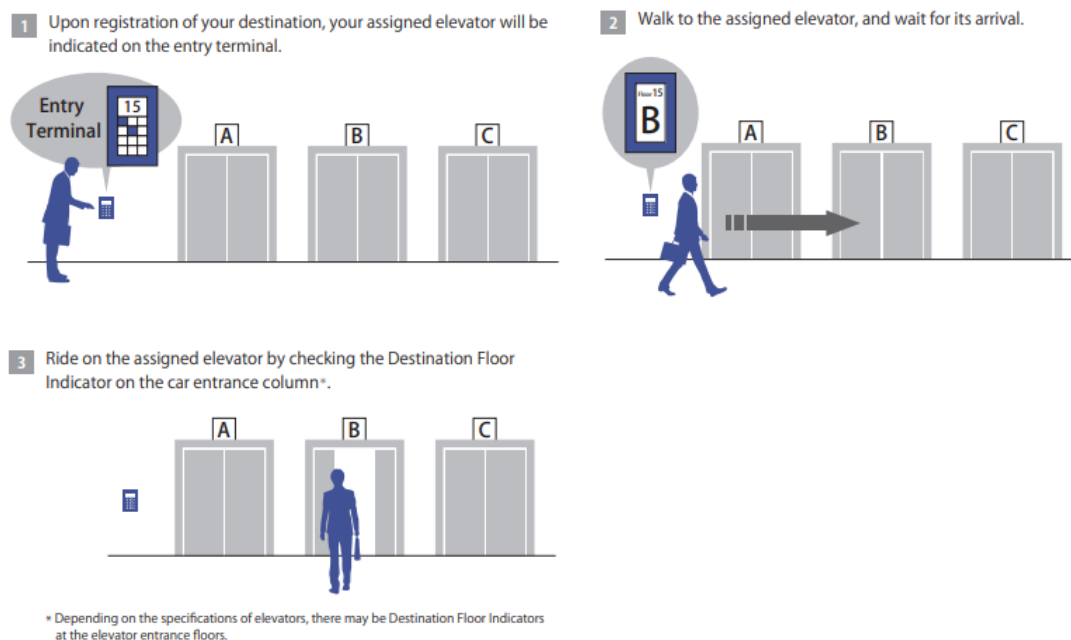

Building Name	Three Garden Road
Building Height	Champion Tower 50 floors above ground ICBC Tower 40 floors above ground
Constructed	1992
Modernization Period	July 2020 – September 2023
Number of Units	44 Fujitec elevators (including 16 high-speed models with a speed of 480 m/min)
Added Features	EZSHUTTLE

*Fujitec also delivered 10 Fujitec escalators to Three Garden Road.

Overview of EZSHUTTLE Features

EZSHUTTLE is a system in which passengers register their destination floor before boarding the elevator, allocating the optimal elevator in use to the user and streamlining operations without increasing the number of elevators. The EZSHUTTLE system cuts passenger riding times by up to 50% and is designed for large office buildings that are prone to long waits during morning commutes and other times of the day.

*Average service completion time (average time from initial call to arrival at the destination floor) reduced up to 50% compared with conventional Fujitec systems. Simulation results are for office buildings.
