

Fujitec Indonesia Renews Fastest Elevators

Delivery of 19 elevators for Wisma 46, a high-rise office building in Jakarta

Shiga, Japan - Fujitec Co., Ltd. delivered 19 renewed elevators through its Group Company P.T Fujitec Indonesia to Wisma 46, a 48-story office building in central Jakarta. Elevators delivered include 6 elevators that operate at 360 meters per minute, the fastest speed available at Fujitec Indonesia.

Fujitec renewed our elevators installed in 1996 at Wisma 46 to maintain safety and enhance functionality. These elevators are the first at Fujitec Indonesia to introduce the EZSHUTTLE control system, which eases traffic from long elevator wait times. The EZSHUTTLE system assigns elevator cars to passengers automatically according to their destination floors, improving operation efficiency.

In the 1960s, Fujitec was the first in the Japanese elevator and escalator industry to expand overseas. The high-rise and large-scale projects delivered by the Company in the 1980s and 1990s are now up for modernization. Fujitec works to accumulate expertise in elevator and escalator modernization to establish the Company track record in each region and developing specialized human resources. In this way, the Company is committed to becoming a pioneer to meet demand expected to grow in mature markets.

※Elevator modernization is the process of improving elevator performance by transforming old elevators into ones equipped with the latest technology.

Wisma 46 exterior

Wisma 46 Overview

Wisma 46 is one of the most iconic office buildings in Jakarta. The building is famous symbol of the business district and is shaped like a fountain pen. Wisma 46 is an office building featuring functions to support business needs, including a convention hall, meeting rooms, and virtual offices. The building also offers various banking services, delivery services, a clinic and restaurants.

(Green Building Council Indonesia GREENSHIP certification in progress)

Overview of EZSHUTTLE Features

EZSHUTTLE is a system in which passengers register their destination floor before boarding the elevator, allocating the optimal elevator in use to the user and streamlining operations without increasing the number of elevators. The EZSHUTTLE system cuts passenger riding times by up to 50% and is designed for large office buildings that are prone to long waits during morning commutes and other times of the day.

*Average service completion time (average time from initial call to arrival at the destination floor) reduced up to 50% compared with conventional Fujitec systems. Simulation results are for office buildings.
