

Delivered Fujitec Vietnam's First 240 m/min High-speed Elevators

Offering Japanese elevators to the TAISEI SQUARE HANOI office building that pursued the excellent quality of Japan in Hanoi City

Shiga, Japan - Fujitec Co., Ltd. delivered Fujitec Vietnam's first high-speed elevators that travel at 240 meters per minute to TAISEI SQUARE HANOI office building, which opened in September in the City of Hanoi, through Fujitec Vietnam Company Ltd., a Fujitec Group company in Vietnam.

High-speed elevators that travel faster than 150 meters per minute require more advanced technical expertise for installation and maintenance compared to standard elevators provided to residences and commercial facilities. Fujitec delivered 10 elevators in total including four high-speed elevators that travel at 240 meters per minute to TAISEI SQUARE HANOI. In addition, in line with the concept of the building to provide a Japanese-quality workplace, the elevators are equipped with enhanced comfort with touchless buttons originating from Japan and IONFUL, a Plasmacluster Ion Generating System.

Fujitec Vietnam works on the sales, installation, and maintenance of elevators and escalators primarily in Hanoi and Ho Chi Minh cities. The company's extensive achievements include the delivery of elevators and escalators to Noi Bai International Airport, which was constructed with the use of Japan's Official Development Assistance (ODA), and AEON Malls, which have been opening at a rapid pace in Vietnam. Fujitec Vietnam will continue to contribute to the growth of sustainable cities by assisting the vertical movement of people with safe and reliable elevators and escalators as a brand originating from Japan.

[TAISEI SQUARE HANOI Overview]

TAISEI SQUARE HANOI is an office building positioned as the flagship of international business of the Taisei Group. With the goal of providing a Japanese-quality, comfortable, and eco-friendly workplace, TAISEI SQUARE HANOI has also earned the distinction of being the first leased office building in western Hanoi to receive LEED certification. The building addresses common concerns in Hanoi office buildings—such as restrooms, air conditioning, and elevators—to ensure a comfortable and seamless working environment and contributes to enhancing the overall office environment.
