Fujitec Co., Ltd.**Fujitec Launches "Control Modernization Package" for the Hong Kong Market**
Providing Cost-Effective and Time-Efficient Elevator Modernization

Fujitec (HK) Co., Ltd., a group company of Fujitec Co., Ltd. (Head Office: Hikone City, Shiga Prefecture, Japan; President and CEO: Masayoshi Harada), has officially launched the "Control Modernization Package" for the Hong Kong market, primarily targeting mid-sized offices and residential buildings.

In the Hong Kong market, the primary challenges for elevator modernization are high costs and extended downtime during construction. This new package offers an optimal menu of solutions, allowing clients to select necessary equipment upgrades based on their specific requirements. The result is a modernization process that is cost-effective, time-efficient, and minimizes environmental impact.

Control Modernization Package: Conceptual Image

■ Optimized Modernization: Maximizing Value, Minimizing Downtime

Elevators that have been in service for 20 to 25 years require modernization to ensure continued safety, security, and operational comfort. However, because long-term suspension of elevator service impacts facility accessibility, there is a high demand for shorter construction periods. The "Control Modernization Package" addresses this by reusing serviceable components and focusing exclusively on replacing the core control systems essential for safe operation.

■ Save Up to 40%* on Installation Time and Modernization Costs

Compared to a full-replacement, this package reduces construction time, costs, and waste by approximately 40%. Furthermore, by reusing serviceable components, the package significantly minimizes environmental impact, contributing to a more sustainable modernization process.

Fujitec continues to expand its lineup of modernization packages and compatible models globally. Moving forward, Fujitec remains committed to providing products that align with customer needs, ensuring the "safe and dependable" management of elevators while contributing to a sustainable society.

* Figures represent a comparison of standard construction time and costs between a full-replacement and the Control Modernization Package.

【Product overview】

Scope of Application	Elevator with machine room Manufactured 1975–2010; Capacity up to 1,600kg; Speed up to 150m/min
Key Upgrades	<ul style="list-style-type: none"> •Control Panel Replacement: Ensures parts supply and safety •Traction Machine Replacement: Adds Double-brake systems and safety •Door Inverter Upgrades: Enhanced safety, operations, and comfort
Pricing	Available upon request
Sales Launch	February 1, 2026
Availability	July 2026 (Scheduled)

【About Fujitec Hong Kong】

Company name	Fujitec (HK) Co., Ltd.
Representative	Kam Lung, Dixon, Lee
Head Office	Connaught Road, Hong Kong
Establishment	1964
Line of Business	Manufacture, sales, installation, maintenance, and repair of elevators and escalators

【About Fujitec】

Fujitec is a specialist manufacturer of elevators, escalators, and moving walks. Fujitec provides safe, secure, and comfortable moving spaces in 23 countries and regions around the world through an integrated system of research and development, manufacturing, sales, installation, maintenance, and modernization.
